

Main Gate Security Upgrade is Complete!!

The security upgrade to the main entry gate has been completed. There are multiple ways to open the main gate when it is closed:

- **Car Decal (easiest):** In the near future, each unit will be issued a small RFID decal to be placed on the left headlight of your car. (Additional decals can be purchased from Denise Duffina, Master CAM, for owners who have more than one car.) When you turn into the driveway the RFID decal will be read at distance by the antenna installed near the silver keypad box and the gate will open.

- **New Key Tag (easy):** When you have driven up next to the silver keypad box simply place your new key tag (the one you use to enter your building) near the tag reader mounted on the silver box and the gate will open.
- **Keypad Resident Look-Up:** Your guests can look you up on the silver keypad box and press “call”. When your phone rings, you may speak to the person at the keypad box and then **press 9** on your phone’s keypad to activate the gate. Hint: Each listing on the box has a 3-digit code next to the name; rather than bother scrolling to find your name you can tell your guests this 3-digit code and they can simply key that number in and your phone will ring. (Also remember, if you leave home without your key tag you can use the keypad to dial yourself or neighbor to be let in.)
- **Pin Numbers:** If you were assigned a 4-digit PIN Number when your building system was upgraded, that same PIN number is useable at the main gate. **Press # then your 4-digit PIN.**
- **Old Pushbutton Key Fobs:** If you still have your old, original pushbutton key fob, it will still activate the gate mechanism at this time. However, in the future if the gate motor is replaced it will no longer work. Likewise, if you had programmed your car’s built in remote controller to work on the gate, it will work at this time.
